The 'Milk Thief' Sampler

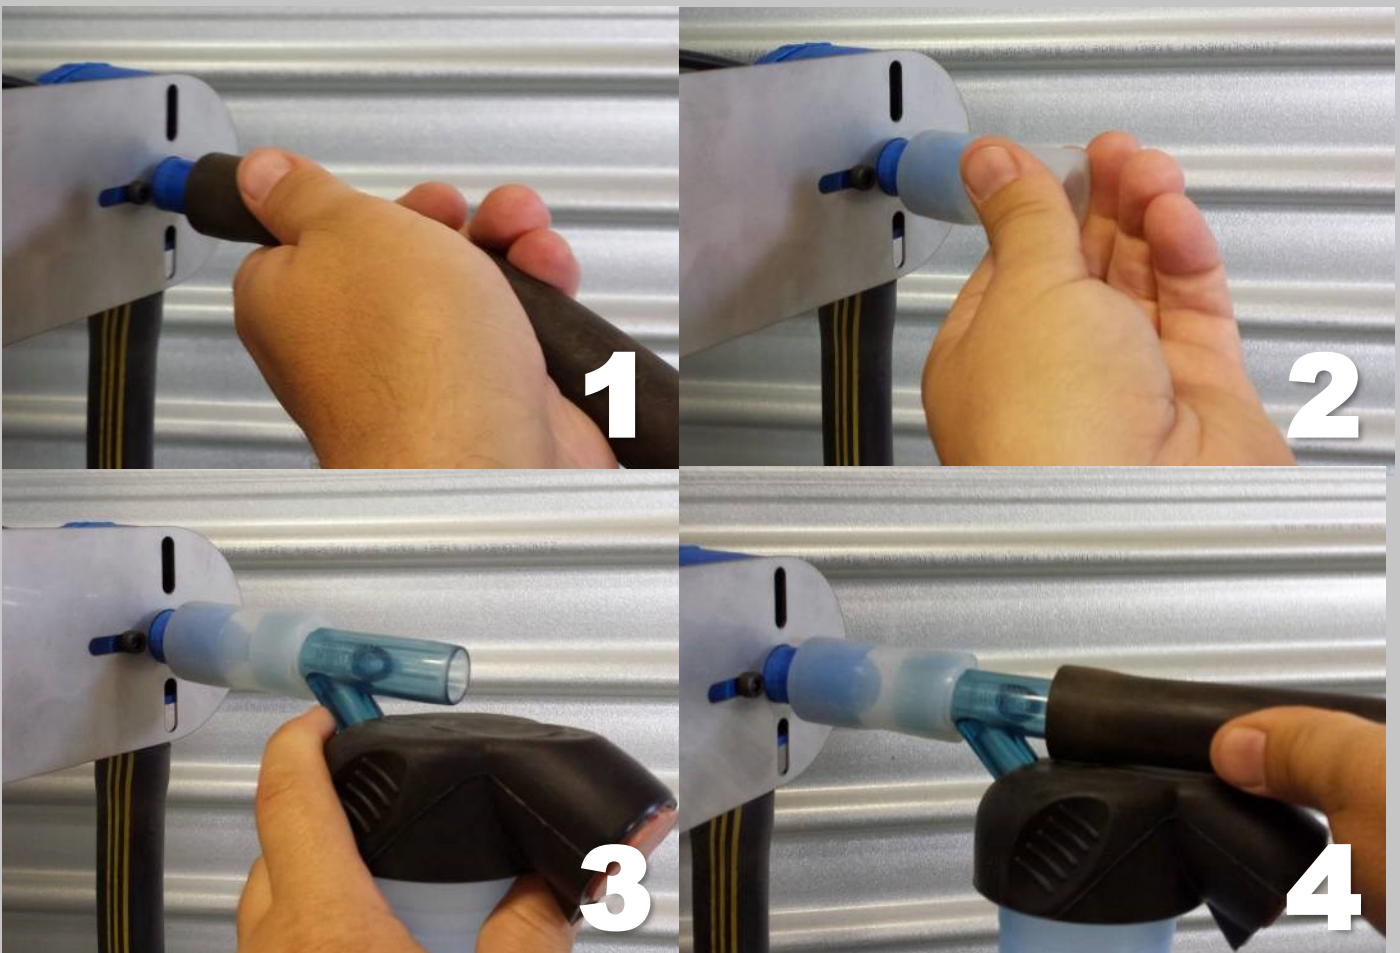

A simple milk sampling solution, the 'Milk Thief' was developed in Ellinbank by the Department of Environment & Primary Industries (DEPI) to reduce the labour time in herd testing.

It can be installed or removed in under one minute per bail and is suitable for both Rotary and Herringbone sheds

Manufactured in Gippsland, it has been rigorously tested and in circulation for over ten years.

Key Features include:

- Fast installation and removal
- Compact and easy to clean
- Takes industry standard 55mm (OD) sampling flasks (typically 155mm or 120mm tall)
- Side port suitable for micro sub sample collection
- Three sizes of sampling for the highest to lowest production herds (0.8mm, 1.0mm, and 1.2mm) plus more on request

Left: The Milk Thief's universal design means it can be used for both horizontal or vertical sampling.

Right: Simply flick the silicon cap off to remove the flask, then press the flask back into the cap to reinstall

Installation in 4 easy steps (see left)

1. Remove the milk cluster line
2. Fit silicon (or rubber) coupler
3. Slide Milk Thief into coupler
4. Reattach the cluster milk line

“An economical means of taking small milk samples for dairy herd recording and disease eradication purposes. The smaller samples collected via the Eli Milk Thief reduces the volume of milk handled as part of normal herd test activities and allows simple pooling of milk samples for testing for diseases such as enzootic bovine leucosis”
